$\delta_E$ : Convergence error of the total energy in Ha/atom

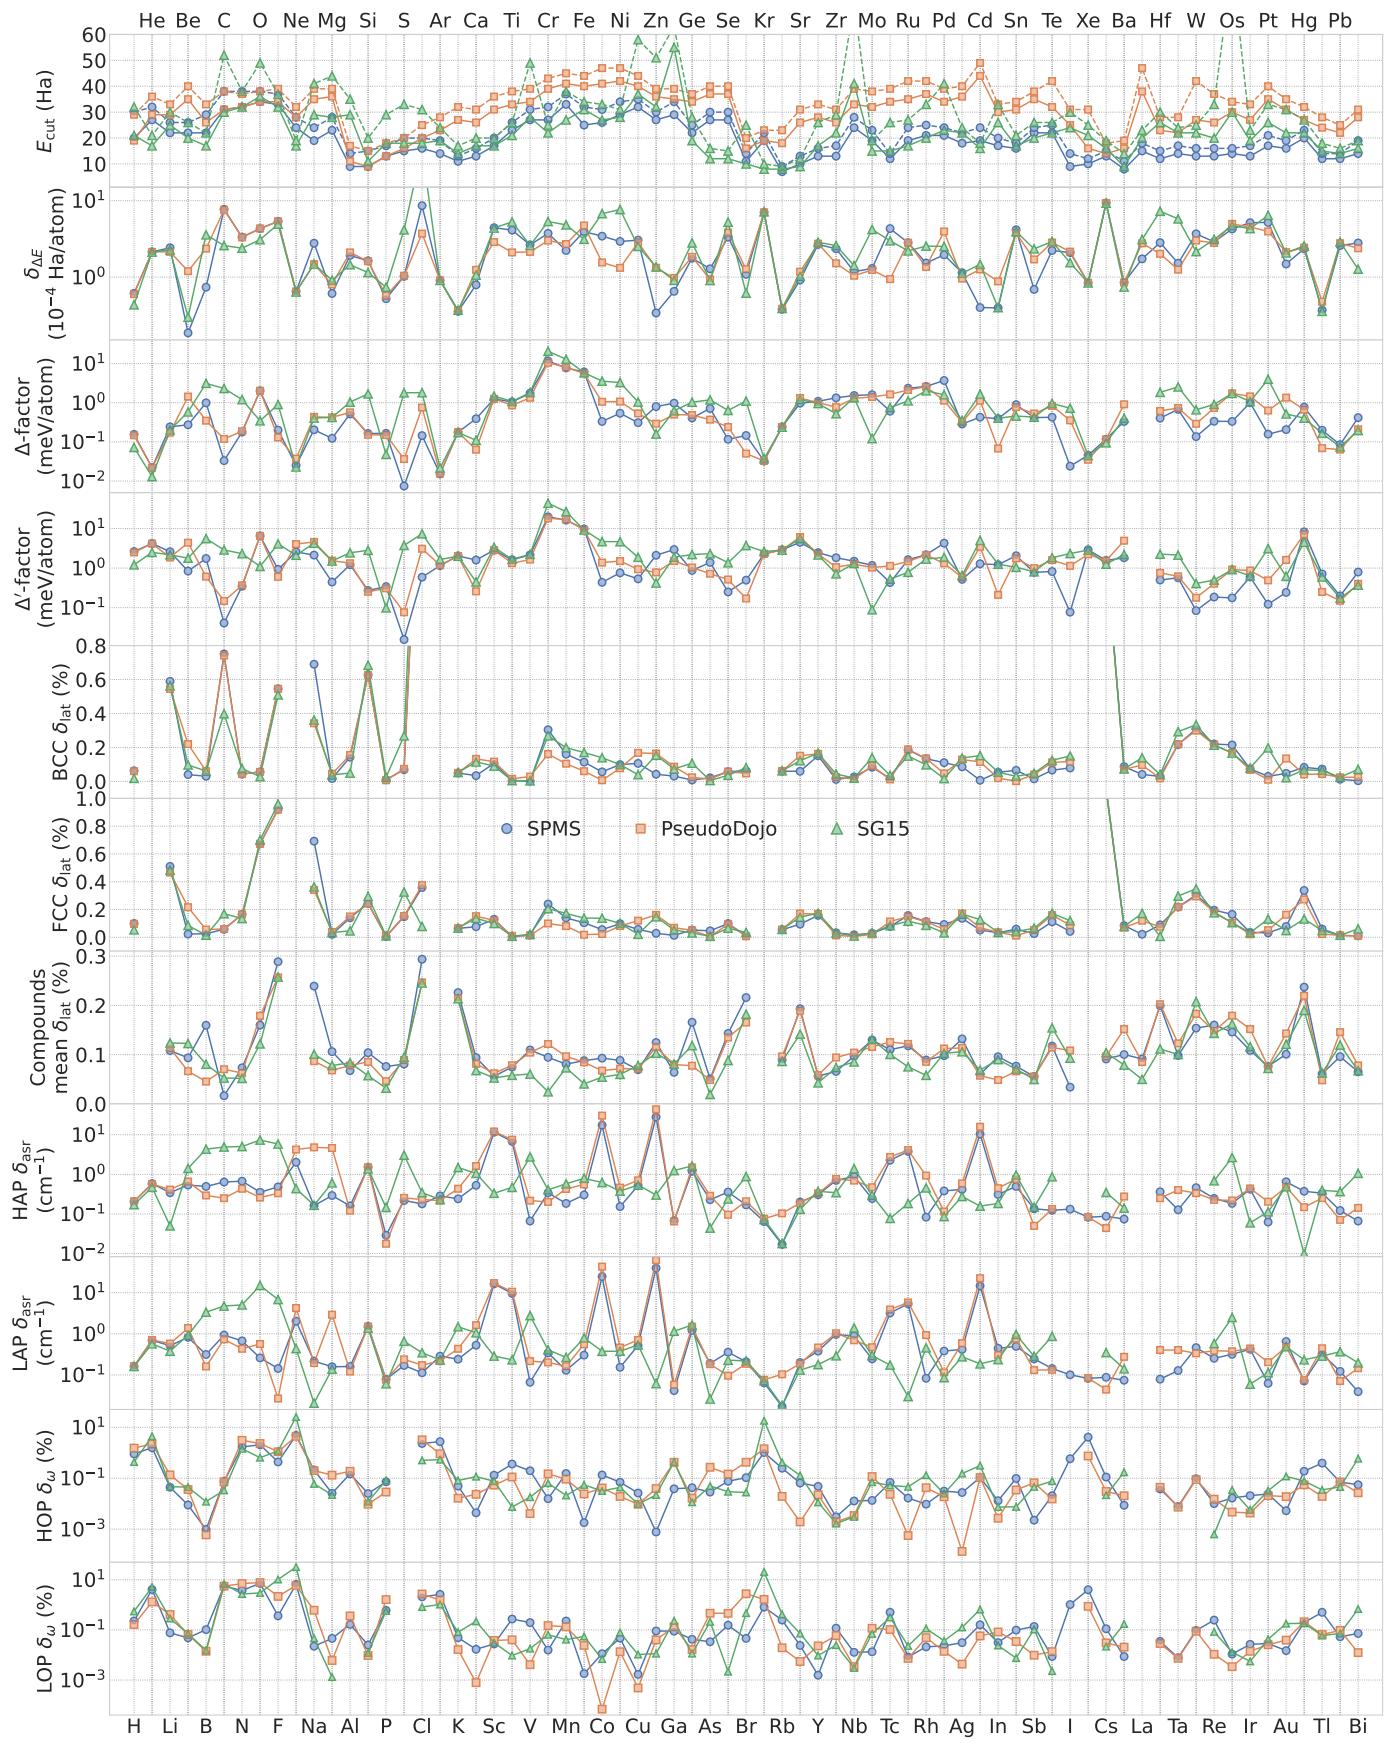

$\delta_{\Delta E}$ : The accuracy metric in  $10^{-4}$  Ha/atom used for SPMS optimization.

$\Delta$  and  $\Delta'$ : The  $\Delta$ -factor and  $\Delta'$ -factor in meV/atom.

$\delta_{\text{lat}}$ : Mean of absolute value of percentage lattice constant errors for BCC, FCC, and compound (COMP) structures used to test the GBRV table

$\delta_{\text{asr}}$ : Mean of absolute value of acoustic sum rule errors in  $\text{cm}^{-1}$  for the highest and lowest acoustic phonon frequencies (HAP and LAP) at  $\Gamma$ -point obtained for the  $\Delta$ -factor lattice structures

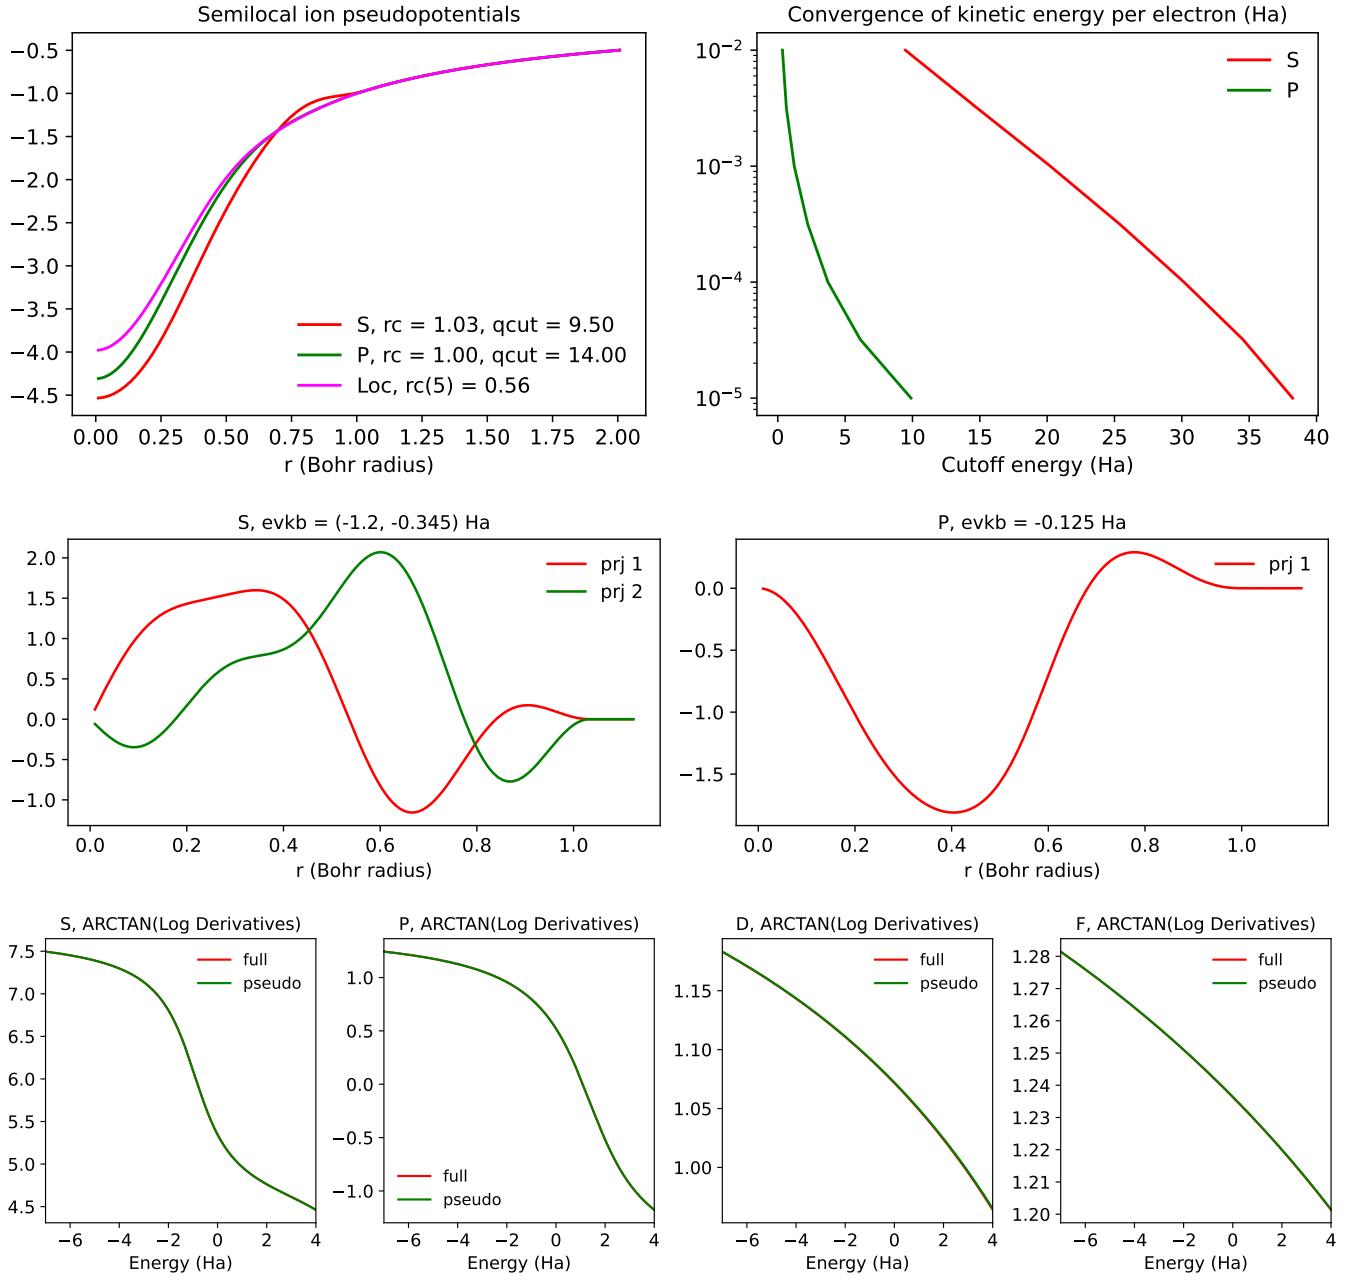

$\delta_{\omega}$ : Mean of absolute value of percentage phonon frequency errors for the highest and lowest optical phonon frequencies (HOP and LOP) obtained after imposing the acoustic sum rule at  $\Gamma$ -point for the  $\Delta$ -factor lattice structures and  $E_{\text{cut}}$  corresponding to  $\delta_E = 10^{-4}$  Ha/atom
